## Review of Parent and Student Reports Rating Content

The following items received clinical ratings given by at least one individual or at one point in time, and may suggest problems in adjustment. Although answers to individual items should not be given too much emphasis, these ratings may suggest areas for further inquiry. Only those items receiving such ratings have been printed. This listing also provides a direct comparison of item responses between the two ratings.

The letter in parentheses indicates the clinical direction (T = True; F = False).
