Introduction

Jesness Inventory-Revised (JI-R) was designed to help caseworkers, psychologists, teachers, youth counselors, and parole and probation staff better understand the nature and differences that define the groups of people with whom they work.

The information in this profile report should not be used as the sole basis for intervention or clinical diagnosis. This report works best when combined with other sources of relevant information (e.g., observation, historical information). Clinical acumen is required to detect interpretive subtleties that may exist for specific cases. The information contained in this report should be treated as confidential.

JI-R T-scores

The following graph shows the respondent's T-scores for the personality scales, DSM-IV™ scales, and Asocial Index.
